

Terra Australis Geophysics Pty Ltd

We see the Invisible

We service the engineering, environmental, agricultural and resource industries by providing information on the property and structure of the underground material.

Under the cover of the surface soil,

- ★ There may be hard rock formation that provides safe footing to the construction of buildings, bridges, pipelines, railways and roads;
- ★ There may be void like cave that may cause difficulty in construction;
- ★ There may be water saturated layer that may benefit agriculture; that water may have high salinity harmful to them; or
- ★ There may be oil / gas / coal / minerals resources worth millions of dollars.

But who knows its existence and how deep?

Terra Australis Geophysics Pty Ltd applies the seismic and electromagnetic methods to probe the underground from the surface

Company Profile

Terra Australis Geophysics

was founded in 2003 by Koya Suto.

Koya graduated from Akita University, Japan, with a Masters degree, and further studied in the University of Adelaide.

He worked for the resources industry for over 20 years.

Terra Australis Geophysics extends areas of application of geophysics beyond resource exploration.

Our Services

Our core business

High Resolution
Seismic Data
Acquisition

Multi-Channel Analysis Surface
Wave Using **SurfSeis** of Kansas
Geological Survey

And More

Refraction and ReMi analysis with
SeisOpt software

Ground Electromagnetic
Survey with multi-channel
electromagnetic sensor

Ground Penetrating Radar Survey
with Georadar Research

Seismic Data Processing with SPW
of **Parallel Geoscience Corp.**

Sales and support for
the **Intrepid** group of
geophysical software

Technical translation between English and Japanese
